EV Market Dashboard: Setup Guide and Key Insights

A short guide to building the Tableau dashboard from `ev_market_data.csv`, with the headline numbers from the dataset.

Dataset

The project uses `ev_market_data.csv` (150 rows) with these columns: Manufacturer, Model, Category, Battery_Type, Battery_Capacity_kWh, Range_km, Price_USD, Annual_Sales, Customer_Rating, Manufacturing_Country and Year. Total annual sales across the file is about 4.3 million units.

This is a synthetic sample dataset, so the figures below describe this file and should not be presented as real market facts.

Quick start in Tableau

1. Open Tableau, choose **Connect → Text file**, and select `ev_market_data.csv`.
2. Check that `Year` is a Dimension (right-click → Convert to Dimension if it shows as a Measure).
3. Set the Geographic Role of `Manufacturing_Country` to Country/Region.
4. Build the individual sheets, then assemble them into one dashboard with shared filters for Year, Category and Battery_Type.

Key insights from the data

Sales by category

Two-Wheelers lead by a wide margin with about 2.55 million units. Hatchback (932K), Sedan (922K) and SUV (741K) follow. Buses (58K) and Trucks (40K) are small niches.

Top manufacturers

Ola Electric leads with about 16.3% market share, followed by Mahindra (12.9%) and BMW (10.6%).

Battery technology

LFP and NMC dominate, with about 1.8 million and 1.76 million units sold. NCA follows, while Sodium-Ion and Solid-State are still emerging.

Driving range

Sedans have the highest average range at about 507 km, then SUVs at 461 km. Two-Wheelers average about 152 km.

Customer satisfaction

Ratings are close across categories, between 4.1 and 4.3. Sedans and Trucks are highest at 4.3.

Manufacturing country

India leads production-linked sales with about 2.27 million units, followed by Germany (894K) and South Korea (829K).

Yearly trend

Sales peaked in 2023 at about 1.6 million units and fell in 2024 and 2025. Describe this as "the dataset shows" rather than as a real market trend.

Note for the report

Mention in your submission that the data is a representative sample dataset, so readers know the insights reflect this file only.
